LIST OF TABLES

- Table 1** Number and percentage of cases registered as "Neoplasm NOS" (ICD-O M8000-M8005) by cancer registry and age group in 2007-2009
- Table 2** Number and percentage of cases of leukaemia registered with a non-specific morphology code by age group in 2007-2009
- Table 3** Number and percentage of cases of leukaemia registered with a non-specific morphology code (ICD-O M9800, M9801, M9820 and M9860) by cancer registry and age group in 2007-2009
- Table 4** Number and percentage of cases of lymphomas registered as "Lymphoma NOS" (ICD-0 M9590) by cancer registry and age group in 2007-2009
- Table 5** Number and percentage of cases of CNS and other intracranial and intraspinal malignant neoplasms registered as "Glioma NOS" (ICD-0 M9380) by cancer registry and age group in 2007-2009
- Table 6** Number and percentage of cases of soft tissue sarcomas registered as "Sarcoma NOS" (ICD-0 M8800) by cancer registry and age group in 2007-2009
- Table 7** Number and percentage of cases of ovarian cancer by morphological type by age group in 2007-2009
- Table 8** Number of cases of ovarian cancer by morphological type by cancer registry and age group in 2007-2009

BACKGROUND

The North West Cancer Knowledge and Intelligence Team and NW Cancer Registry together provide the lead registry function for cancer in teenagers and young adults which is one of the National Cancer Intelligence Network's (NCIN) twelve specialist cancer areas. Each lead intelligence and registry team supports a National Cancer Intelligence Network Site Specific Clinical Reference Group (NCIN SSCRG) for their respective specialist area or tumour site. One of the roles of these lead areas is to examine the completeness and quality of cancer registration data and other routine NHS data sets that form the basis of much of the cancer intelligence published by NCIN and others as well as informing many research projects.

The aim of this data quality report is to examine the frequency of non-specific morphology codes within the National Cancer Data Repository (NCDR) for cancers relevant to teenagers and young adults.

The availability of accurate and detailed morphology codes is important when undertaking detailed descriptive epidemiological analyses and assessing the appropriateness of patient management at a sub-group level. This is particularly so when undertaking analyses on the spectrum of cancers seen in teenagers and young adults. The classification of cancers in terms of primary site according to the International Classification of Diseases (ICD) (World Health Organisation, 1975, 1992; Parkin *et al*, 1997) is broadly satisfactory for late age of onset, cancers which are mainly carcinomas, but in young people carcinomas are much less important numerically (Birch *et al* 2002). The types of cancer that are relevant to teenagers and young adults (15 to 24 year olds) are different than those in older adults and should be presented mainly in terms of morphology. For this purpose a diagnostic classification scheme was developed by Birch and colleagues (2002) based on morphology which is now widely adopted to provide an accurate picture of the cancers in this age group (see Appendix 3). Where only non-specific morphology codes are available, this classification system becomes much less informative.

The National Cancer Data Repository (NCDR) is a merged dataset of all cancer registrations of patients diagnosed in England. The data contain details of each cancer diagnosis and treatment, and demographic information about cancer patients. Site codes within the 2009 NCDR are all classified according to the International Classification of Diseases, Tenth Revision (ICD10). Morphologies are classified either as ICD-02 or ICD-03.

Here we provided details of the number and percentage of cases diagnosed that have only a non-specific general code (e.g. neoplasm NOS) or a code that provides only limited information about the diagnosis (e.g. Glioma NOS) for a selection of diagnosis types relevant to teenagers and young adults. These analyses are provided by age, diagnosis and cancer registry. Cancer registrations are still captured regionally although now registered into a central data system. Cancer data relevant to all new diagnoses are submitted by hospitals and other NHS organisations to their respective regional registries. The regional registries then collate and register all of the information into a central database called Encore. Information on diagnosis that enables a morphological code to be recorded at the point of registration for each cancer diagnosis can be derived from a number of sources, both clinical and diagnostic. Additional information on the basis of diagnosis recorded at the time of registration is also provided here (see Appendix 3-12) as background information on how morphological codes may be derived including which cases have been microscopically verified.

METHODS

Data on all patients aged 0 to 49 years, who were diagnosed between 2007 and 2009 in England, were extracted from the 2009 edition of the National Cancer Data Repository (NCDR). TYA patients have been classified into 15-18 and 19-24 year age groups. The age groups 0-14 and 25-49 years have been used for comparison.

The following morphology codes were chosen as they do not usually allow patients to be classified to a specific diagnostic group for the purposes of descriptive epidemiology or for assessing the appropriateness of their management. However, it should be remembered that several of these are the correct morphological code for certain tumour subtypes.

General non-specific codes (*CNS tumours only)

- *Neoplasm, benign (ICD-O M8000)**
- *Neoplasm, uncertain whether benign or malignant (ICD-O M8000)**
- *Neoplasm, malignant (ICD-O M8000)*
- *Tumour cells, benign (ICD-O M8001)**
- *Tumour cells, uncertain whether benign or malignant (ICD-O M8001)**
- *Tumour cells, malignant (ICD-O M8001)*
- *Malignant tumour, small cell type (ICD-O M8002)*
- *Malignant tumour, giant cell type (ICD-O M8003)*
- *Malignant tumour, spindle cell type (ICD-O M8004)*
- *Clear cell tumour, NOS (ICD-O M8005)*
- *Malignant tumour, clear cell type (ICD-O M8005)*

Leukaemia

- *Leukaemia, NOS (ICD-O M9800)*
- *Acute leukaemia, NOS (ICD-O M9801)*
- *Lymphoid leukaemia, NOS (ICD-O M9820)*
- *Myeloid leukaemia, NOS (ICD-O M9860)*

Lymphoma

- *Malignant lymphoma, NOS (ICD-O M9590)*

CNS and other intracranial and intraspinal neoplasms

- *Glioma, malignant (ICD-O M9380)*

Soft Tissue Sarcomas

- *Sarcoma, NOS (ICD-O M8800)*

We have also included a breakdown of ovarian cancers by morphology, as the relative proportions which are germ cell tumours and carcinomas are of interest. The following categories have been used:

- *Carcinomas (ICD-O M8010-M8576)*
- *Germ cell (ICD-O M9060-M9105)*
- *Other specific (ICD-O M8590-M9055 and M9110-M9989)*
- *Non-specific (ICD-O M8000-M8005)*

RESULTS

A. NON-SPECIFIC GENERAL MORPHOLOGY CODES

Table 1: Number and percentage of cases registered as "Neoplasm NOS" (ICD-O M8000-M8005) by cancer registry and age group in 2007-2009

| Cancer Registry | 0-14 | | 15-18 | | 19-24 | | 15-24 | | 25-49 | | 0-49 | |
|-----------------|--------------|----|--------------|-----|--------------|----|--------------|-----|--------------|----|--------------|----|
| | no. of cases | % | no. of cases | % | no. of cases | % | no. of cases | % | no. of cases | % | no. of cases | % |
| NYCRIS | 3 | 1% | 3 | 1% | 6 | 1% | 9 | 1% | 115 | 1% | 127 | 1% |

C. LYMPHOMA

Table 4: Number and percentage of cases of lymphoma registered as "Lymphoma NOS" (ICD-0 M9590) by cancer registry and age group in 2007-2009

| Cancer Registry | 0-14 | | 15-18 | | 19-24 | | 15-24 | | 25-49 | | 0-49 | |
|-----------------|--------------|----|--------------|----|--------------|----|--------------|----|--------------|----|--------------|----|
| | no. of cases | % |
| NYCRIS | 0 | | 0 | | 0 | | 0 | | 8 | 1% | 8 | 1% |
| TCR | 5 | 9% | 1 | 2% | 4 | 6% | 5 | 4% | 28 | 5% | 38 | 5% |
| ECRIC | 1 | 2% | 1 | 2% | 0 | | 1 | 1% | 15 | 3% | 17 | 2% |
| THAMES | 6 | 5% | 5 | 6% | 6 | 3% | 11 | 4% | 107 | 7% | 124 | 7% |
| OClU | 0 | | 0 | | 0 | | 0 | | 4 | 1% | 4 | 1% |
| SWCIS | 1 | 2% | 1 | 2% | 1 | 1% | 2 | 1% | 45 | 6% | 48 | 5% |
| WMCIU | 1 | 3% | 0 | | 0 | | 0 | | 10 | 2% | 11 | 2% |
| NWCIS | 1 | 2% | 0 | | 1 | 1% | 1 | 1% | 39 | 6% | 41 | 5% |
| ENGLAND | 15 | 4% | 8 | 2% | 12 | 2% | 20 | 2% | 256 | 5% | 291 | 4% |

Though the morphology code lymphoma NOS does not allow one to distinguish between NHL and HL (there are separate codes for NHL NOS and HL NOS), the vast majority of cases with this code have been allocated by the relevant registry to NHL in ICD-10. It is not clear how this has occurred and whether a more specific morphology code should have been used.

D. CNS AND OTHER INTRACRANIAL AND INTRASPINAL NEOPLASMS

Table 5: Number and percentage of cases of CNS and other intracranial and intraspinal malignant neoplasms registered as "Glioma NOS" (ICD-0 M9380) by cancer registry and age group in 2007-2009

| Cancer Registry | 0-14 | | 15-18 | | 19-24 | | 15-24 | | 25-49 | | 0-49 | |
|-----------------|--------------|-----|--------------|-----|--------------|----|--------------|----|--------------|----|--------------|----|
| | no. of cases | % | no. of cases | % | no. of cases | % | no. of cases | % | no. of cases | % | no. of cases | % |
| NYCRIS | 23 | 19% | 1 | 3% | 2 | 4% | 3 | 3% | 15 | 2% | 41 | 5% |
| TCR | 14 | 13% | 0 | | 2 | 3% | 2 | 2% | 15 | 3% | 31 | 4% |
| ECRIC | 12 | 10% | 4 | 11% | 0 | | 4 | 5% | 15 | 3% | 31 | 4% |
| THAMES | 35 | 15% | 5 | 10% | 7 | 9% | 12 | 9% | 30 | 3% | 77 | 5% |

DISCUSSION

Knowing the histological or morphological type of cancer for TYA patients is very important, as the diagnostic classification and management of patients are largely based on the histological type of tumour. We, therefore, decided to review the proportion of TYA patients with a non-specific morphological diagnosis, based on the International Classification of Diseases for Oncology Morphology (M) code, as a measure of the quality of data on the National Cancer Registry Database.

We used non-specific codes at two levels. The first, which we termed general non-specific codes, refers to when a patient was allocated a M code of tumour/neoplasm/cancer not otherwise specified (NOS), with or without a simple descriptive term such as small, giant or spindle shaped. It is not possible to classify most patients with this code into one of the specific major diagnostic groups in the TYA cancer classification system (Birch et al 2002). There are another group of NOS M codes, which allow the patient to be allocated to one of the major diagnostic groups but provide no further details. An example is soft tissue sarcoma NOS. Analyses have been undertaken for such codes. ICD-O includes a third larger group of NOS codes, for example fibrosarcoma NOS, most of which provide sufficient information for the types of analyses that are undertaken on datasets based on cancer registration. We have not included analyses on such codes in this report.

Three percent of TYA patients diagnosed with cancer in 2007-2009 in England were allocated a non-specific general code; this varied by registry from 1% to 9%. A higher proportion of patients with Leukaemia (7%), CNS tumours (7%) and STS (9%) had non-specific codes than had patients with lymphoma or ovarian tumours. The proportion of patients with leukaemia, CNS tumours and STS was higher than 10% for several registries, though such % was often based on only a handful of cases. Results for TYA patients are generally similar to those for the 0-14 and 25-49 age groups.

There are a number of reasons why patients may be allocated a non-specific morphology code. The amount of data available on a given patient's tumour may be limited, especially if the tumour was not verified microscopically. Several codes which we have included as non-specific, such as sarcoma NOS and glioma NOS, are the correct morphological codes for certain subtypes of tumour. It is, therefore, to be expected that a proportion of patients will be given a non-specific morphology code. However, this notwithstanding may also be indicative of difficulties in cancer registries accessing all information relating to any one patient. This may particularly be the case if patients are managed by more than one Trust and the flow of data from Trust to Registry is impeded.

If more than 5%, and definitely more those 10%, of patients within a given diagnostic group (or of all cancers with a non-specific general code), are allocated a non-specific M code and if this based on more than a few cases, steps should be taken to understand the reasons and where possible to decrease the problem.

| GROUP 2 – Lymphomas | |
| 2.1 Non-Hodgkin lymphoma (NHL) | |
| 2.1.1 Non-Hodgkin lymphoma, specified subtype | |
| 2.1.2 Non-Hodgkin lymphoma, subtype not specified | |
| 2.2 Hodgkin lymphoma (HL) | |
| 2.2.1 Hodgkin lymphoma, specified subtype | |
| 2.2.2 Hodgkin lymphoma, subtype not specified | |
| GROUP 3 – Central Nervous System & other | |
| Intracranial & Intraspinal Neoplasms (CNS tumours) | |
| 3.1 Astrocytoma | |
| 3.1.1 Pilocytic astrocytoma | |
| 3.1.2 Other low grade astrocytoma | |
| 3.1.3 Glioblastoma and anaplastic astrocytoma | |
| 3.1.4 Astrocytoma not otherwise specified | |
| 3.2 Other gliomas | |
| 3.2.1 Oligodendrogioma | |
| 3.2.2 Other specified glioma | |
| 3.2.3 Glioma NOS | |
| 3.3 Ependymoma | |
| 3.4 Medulloblastoma and other primitive neuroectodermal tumours (Medulloblastoma) | |
| 3.4.1 Medulloblastoma | |
| 3.4.2 Supratentorial PNET | |
| 3.5 Other specified intracranial and intraspinal neoplasms (Other CNS) | |
| 3.5.1 Craniopharyngioma | |
| 3.5.2 Pituitary tumours | |
| 3.5.3 Pineal tumours | |
| 3.5.4 Choroid plexus tumours | |
| 3.5.5 Meningioma | |
| 3.5.6 Nerves sheath tumour of the brain | |
| 3.5.7 Other specified tumours | |
| 3.6 Unspecified intracranial and intraspinal neoplasms tumours | |
| 3.6.1 Unspecified malignant intracranial and intraspinal neoplasms | |
| 3.6.2 Unspecified non-malignant intracranial and intraspinal neoplasms | |
| GROUP 4 – Osseous and Chondromatous Neoplasms, Ewing | |
| Ewing tumour and other Neoplasms of Bone (Bone Tumours) | |
| 4.1 Osteosarcoma | |
| 4.2 Chondrosarcoma | |
| 4.3 Ewing sarcoma | |
| 4.3.1 Ewing sarcoma of bone | |
| 4.3.2 Extraskeletal Ewing sarcoma | |
| 4.3.3 Ewing sarcoma of unknown site | |
| 4.4 Other specified and unspecified bone tumours (Other bone tumours) | |
| 4.4.1 Other specified bone tumours | |
| 4.4.2 Unspecified bone tumours | |
| GROUP 5 – Soft Tissue Sarcomas (STS) | |
| 5.1 Fibromatous neoplasms (Fibrosarcoma) | |
| 5.1.1 Fibrosarcoma | |
| 5.1.2 Malignant fibrous histiocytoma | |
| 5.1.3 Dermatofibrosarcoma | |
| 5.2 Rhabdomyosarcoma | |
| 5.3 Other specified soft tissue sarcomas | |
| 5.3.1 Liposarcoma | |
| 5.3.2 Leiomyosarcoma | |
| 5.3.3 Synovial sarcoma | |
| | 5.3.4 Clear cell sarcoma 5.3.5 Blood vessel tumours 5.3.6 Nerve sheath tumours 5.3.7 Alveolar soft part sarcoma 5.3.8 Miscellaneous specified soft tissue sarcoma |
| | 5.4 Unspecified soft tissue sarcomas |
| | |
| | GROUP 6 – Germ Cell & Trophoblastic Neoplasms (Germ cell tumours) |
| | 6.1 Gonadal germ cell & trophoblastic neoplasms |
| | 6.2 Germ cell & trophoblastic neoplasms of non-gonadal sites |
| | 6.2.1 Intracranial germ cell and trophoblastic tumours |
| | 6.2.2 Other non-gonadal germ cell and trophoblastic tumours |
| | |
| | GROUP 7 – Melanoma and Skin Carcinoma |
| | 7.1 Melanoma |
| | 7.2 Skin carcinoma |
| | |
| | GROUP 8 – Carcinomas (except of skin) |
| | 8.1 Carcinoma of thyroid |
| | 8.2 Other carcinoma of head and neck |
| | 8.2.1 Nasopharyngeal carcinoma |
| | 8.2.2 Carcinoma of other sites in lip oral cavity and pharynx |
| | 8.2.3 Carcinoma of nasal cavity, middle ear, sinuses, larynx and other ill-defined sites in head and neck |
| | 8.3 Carcinoma of trachea, bronchus, lung and pleura |
| | 8.4 Carcinoma of breast |
| | 8.5 Carcinoma of genito-urinary (GU) tract |
| | 8.5.1 Carcinoma of kidney |
| | 8.5.2 Carcinoma of bladder |
| | 8.5.3 Carcinoma of ovary |
| | 8.5.4 Carcinoma of cervix |
| | 8.5.5 Carcinoma of other and ill-defined sites in GU |
| | 8.6 Carcinoma of gastro-intestinal (GI) tract |
| | 8.6.1 Carcinoma of colon and rectum |
| | 8.6.2 Carcinoma of stomach |
| | 8.6.3 Carcinoma of liver and intrahepatic bile ducts |
| | 8.6.4 Carcinoma of pancreas |
| | 8.6.5 Carcinoma of other and ill-defined sites in GI tract |
| | 8.7 Carcinomas of other and ill-defined sites not elsewhere classified (NEC) |
| | 8.7.1 Adrenocortical carcinoma |
| | 8.7.2 Other carcinomas NEC |
| | |
| | GROUP 9 – Miscellaneous Specified Neoplasms NEC |
| | 9.1 Embryonal tumours NEC |
| | 9.1.1 Wilms tumour |
| | 9.1.2 Neuroblastoma |
| | 9.1.3 Other embryonal tumours NEC |
| | 9.2 Other rare miscellaneous specified neoplasms |
| | 9.2.1 Paraganglioma and glomus tumours |
| | 9.2.2 Other specified gonadal tumours NEC |
| | 9.2.3 Myeloma, mast cell tumours and miscellaneous reticuloendothelial neoplasms NEC |
| | 9.2.4 Other specified neoplasms NEC |
| | |
| | GROUP 10 – Unspecified Malignant Neoplasms NEC |
| | |
| | GROUP “OTHER”: non-malignant non-CNS diagnoses registered by TYAC |
| | 1. Aplastic anaemia |
| | 2. Carcinoid tumour |
| | 3. Desmoid tumour |
| | 4. Fibromatosis |
| | 5. Ganglioneuroma |
| | 6. Gestational trophoblastic neoplasm |
| | 7. Haematoma |
| | 8. Hydatidiform mole |
| | 9. Juvenile granulosa cell tumour |
| | 10. Langerhans cell histiocytosis |
| | 11. Lymphoproliferative disorder |
| | 12. MDS |
| | 13. Myofibroblastic tumour |
| | 14. Neurofibromatosis |
| | 15. Non malignant neoplasms |
| | 16. Non Seminomatous Germ Cell Tumour |
| | 17. Non-malignant tumour |
| | 18. Teratoma |
| | 19. Other |

Table A2: Cancer registry codes

| Cancer Registry Name | | Code |
|----------------------|--|-------|
| NYCRIS | Northern and Yorkshire Cancer Registry and Information Service | Y0201 |
| TCR | Trent Cancer Registry | Y0301 |
| ECRIC | Eastern Cancer Registration and Information Centre | Y0401 |
| THAMES | Thames Cancer Registry | Y0801 |
| OCIU | Oxford Cancer Intelligence Unit | Y0901 |
| SWCIS | South West Cancer Intelligence Service | Y1001 |
| WMCIU | West Midlands Cancer Intelligence Unit | Y1201 |
| NWCIS | North West Cancer Intelligence Service | Y1701 |

Table A3: Basis of diagnosis codes recommended by the International Agency for Research on Cancer (IARC) for each cancer registration

| Code | Description | Criteria |
|-----------------|---------------------------------|--|
| 0 | Death certificate only | Information provided is from a death certificate. |
| Non-microscopic | 1 Clinical | Diagnosis made before death, but without any of the following (codes 2-7). |
| | 2 Clinical investigation | All diagnostic techniques, including X-ray, endoscopy, imaging, ultrasound, exploratory surgery and autopsy, without a tissue diagnosis. |
| | 4 Specific tumour markers | Including biochemical and/or immunologic markers that are specific for a tumour site. |
| | 5 Cytology | Examination of cells from a primary or secondary site, including fluids aspirated by endoscopy or needle; also includes the microscopic examination of peripheral blood and bone marrow aspirates. |
| Microscopic | 6 Histology of a metastasis | Histologic examination of tissue from a metastasis, including autopsy specimens. |
| | 7 Histology of a primary tumour | Histologic examination of tissue from primary tumor, however obtained, including all cutting techniques and bone marrow biopsies; also includes autopsy specimens of primary tumor. |
| | 9 Unknown | |

For the analyses on patients with a basis of diagnosis which was microscopically verified (Codes 5 to 7 in Table A3), the tumour groups included were:

- a. Leukaemia
 - *Acute Lymphoblastic Leukaemia (ALL)*
 - *Acute Myeloid Leukaemia (AML)*
 - *Other Leukaemias*
- b. Lymphoma
 - *Non Hodgkin Lymphoma (NHL)*
 - *Hodgkin Lymphoma (HL)*
- c. CNS and other Intracranial and Intraspinal Neoplasms
 - *Benign*
 - *Borderline*
 - *Malignant*
- d. Soft Tissue Sarcomas (STS)
- e. Germ Cell Tumours of the Ovary
- f. Carcinomas of the Ovary

Table A4: Basis of diagnosis codes for acute lymphoblastic leukaemia (ALL), acute myeloid leukaemia (AML) and other leukaemias (groups 1.3 and 1.4 in Table A1) by age group in 2007-09

ACKNOWLEDGEMENTS

We would like to thank all the lead cancer registries contacted for their advice and input with particular thanks to WMCIU. We would also like to thank members of the CTYA SSCRG for their advice and to NWCIS colleagues for their help with editing.

The NCIN is a UK-wide initiative, working to drive improvements in standards of cancer care and clinical outcomes by improving and using the information collected about cancer patients for analysis, publication and research.

Sitting within the National Cancer Research Institute (NCRI), the NCIN works closely with cancer services in England, Scotland, Wales and Northern Ireland. In England, the NCIN is part of the National Cancer Programme.

The National Cancer Intelligence Unit will be hosted by Public Health England from 1st April 2013

Our aims and objectives cover five core areas to improve the quality and availability of cancer data from its collection to use:

- **Promoting efficient and effective data collection throughout the cancer journey**
- **Providing a common national repository for cancer datasets**
- **Producing expert analyses, to monitor patterns of cancer care**
- **Exploiting information to drive improvements in cancer care and clinical outcomes**
- **Enabling use of cancer information to support audit and research programmes**
