# Challenges: wellbeing

- How do we ensure we measure wellbeing and not just illness, disease, deficits?
- Loss of Place Survey, Tellus etc. local areas collect different data that is not comparable
- Childrens' wellbeing data?
- Influencing funders/commissioners to request this data from beneficiaries/providers
- Capacity building within providers
- Difference in methods of collection/sample size/Qs used in Local Residents' Surveys/SHEU

# Challenges: mental disorder

- **Loads of data! Quality is issue**
- **Learning curve for local authorities**
- **How to frame the question/why do you want the info**
- **Systems designed for clinical records not aggregating data**
- **Analysis of the data**
- **Interpretation**
- **Decision making/prioritising – the information won't make the decision for you!**
- **Governance (org change, IT systems)**
- **Social care and health data not connected**

# Planned approach to shortlisting indicators – London wellbeing index

- What does this indicator tell us about measuring wellbeing?
- Is this a reasonable way to measure this indicator?
- What is the data source?
- At what level is the data available? (PCT/Ward/SOA)
- How robust are methods of data collection?/Is it relevant for London?
- Recommendations – In or Out?
- Proposed alternative if indicator should stay in but needs a better measure

# Example: 'Social Wellbeing'

| Wellbeing Indicator  | Data source  | Link to evidence   |
|--|--|--|
| <b>Actual recorded crime (eg. TNOs, DV rates)</b>  | <b>Crime and Disorder Reduction Partnerships</b>           | <b>A measure of social functioning.</b>  |
| <b>Percentage attending creative, artistic, theatrical or musical events in the last 12 months</b> | <b>Active People's Survey</b>                              | <b>Involvement in arts/creative pursuits can enhance wellbeing.</b>  |
| <b>Satisfaction with parks and open spaces/Usage of parks and open spaces</b>                      | <b>General Land Use Database</b>                           | <b>Green spaces promote physical activity. Reduce blood pressure &amp; stress levels &amp; promote faster healing.</b> |
| <b>Number in temporary accommodation</b>   | <b>Statutory Homeless, England Quarterly Release Stats</b> | <b>Poor housing has an impact on mental health.</b>  |
| <b>Voting rates</b>  | <b>UK Political Info (local election data)</b>             | <b>Social capital can be enhanced by improving community participation in local governance.</b>                        |
| <b>Improved street and environmental cleanliness</b>   | <b>Local authority</b>                                     | <b>Neighbourhood enhancement improves mental wellbeing.</b>  |

# What could a NMHIN do?

- **Use the data we have in a better way**
- **Recommend standard wellbeing/life satisfaction scales so LAs use similar Qs**
- **Work with local analysts to use the mental health minimum data set**
- **Support and use learning of projects to link up big data sets (eg. Mental health, primary care, acute, social care)**
- **Communicate data to local authorities**
- **Avoid additional burden of data collection**
- **Promote local public health expertise**

# Summary

- **Plenty of data out there!**
- **Be clear about what you are asking from the data**
- **Wellbeing data is a mix of the subjective and objective**
- **Lots of tools but how to interpret and use for commissioning decision making**
- **Capacity building work needed with commissioners and providers**
- **Data sharing and connection are issues**
