

Rate of under 18 conceptions, 2008-10:

Basic Information	
Further Information:	<p>Please see the official metadata information at the following link, as supplied by the South West KIT lead for the production of the Sexual Health Scorecard</p> <p>http://www.apho.org.uk/resource/item.aspx?RID=117951</p>
Rationale for inclusion	<p>There has been found to be a possible association between age at first child and an increased risk of developing cervical cancer.</p> <p>It may be useful to compare variation in under 18 conception rates and other indicators as this can help to understand patterns of variation and inform efforts to reduce avoidable deaths and improve the health inequalities.</p> <p>For more information on risk factors associated with cervical cancers please see</p> <p>http://www.cancerresearchuk.org/cancer-info/cancerstats/types/cervix/riskfactors/</p>
