National Cancer Intelligence Network

The role of NCIN and the SSCRG work programmes

NCIN Haematological Cancers Workshop, 30th September 2014
Lucy Elliss-Brookes, Analytical Programme Manager, NCIN

The Health & Social Care Act 2012: two new organisations from April 2013

NHS England

- “The purpose of NHS England is to use the £80bn commissioning budget to secure the best possible outcomes for patients”
- To ensure the whole commissioning architecture is in place; will also commission some services directly

Public Health England (PHE)

- Information & Intelligence to support public and local Public Health (PH) making healthier choices
- National Leadership to PH, supporting national policy
- Development of PH workforce
- A civil service function, not NHS

Public Health
England

Providers of information

Health & Social Care Information Centre (HSCIC)

National Audits

Office for National Statistics (ONS)

PHE including Health Intelligence Networks

UK and Ireland Cancer Registries

NHS England Business Intelligence Teams

Information intermediaries

- e.g. Dr Foster, Cancer Research UK, Macmillan Cancer Support, Incisive Health

PHE Chief Knowledge Office (CKO): Knowledge and Intelligence

National Cancer Registration Service (NCRS)

8 regional Knowledge and Intelligence Teams (KITs)

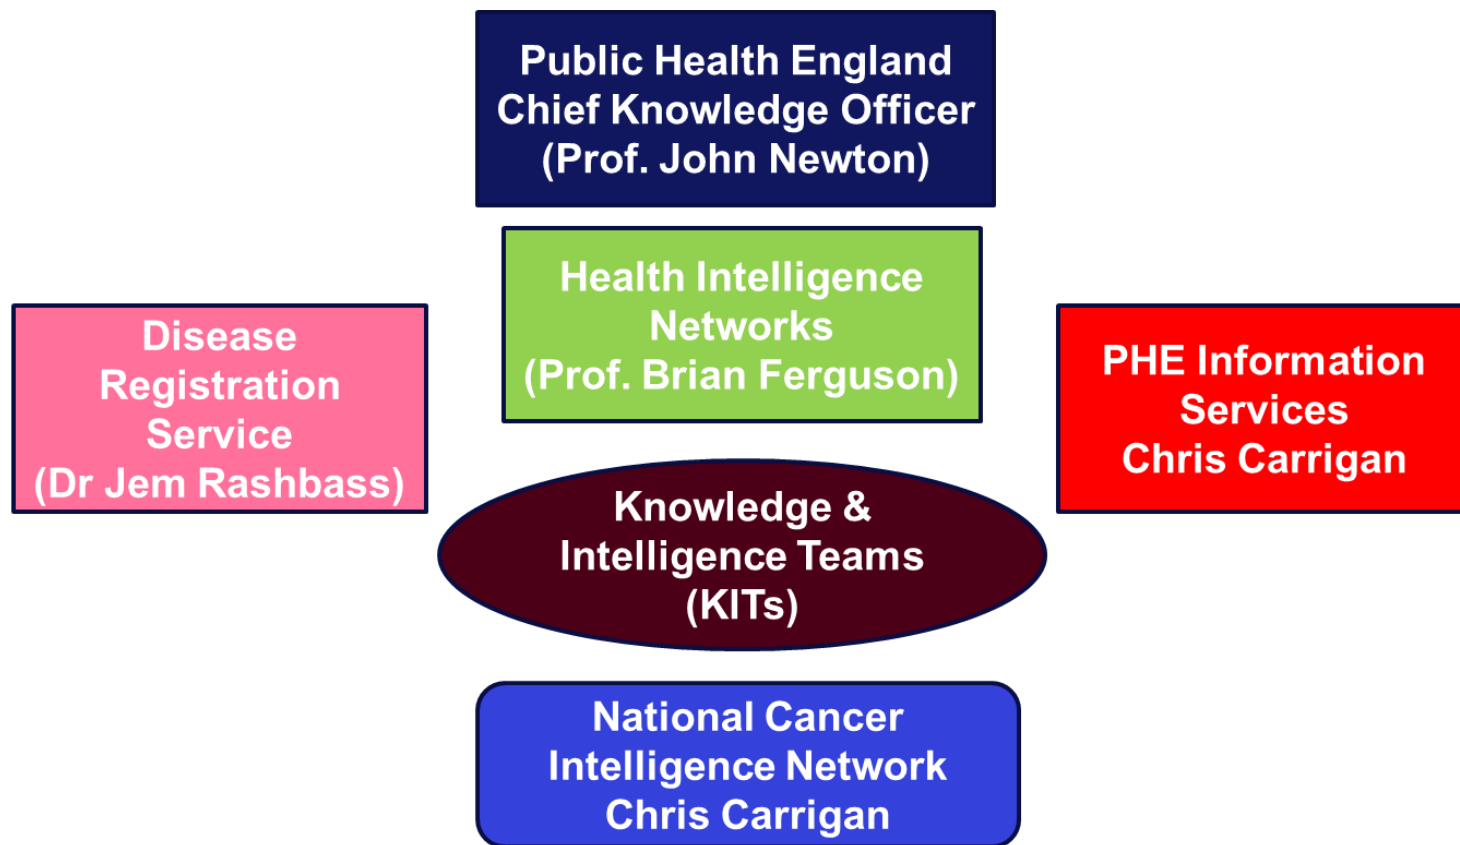

- SSCRG Work Programmes
- Local contribution
- Non cancer work

5 Health Intelligence Networks (HINs):

- Mental Health, Maternal & Child Health, Cardiovascular & Diabetes, End of Life, Cancer (NCIN)

PHE 'intelligence structures'

Cancer data flows

PHE National Cancer Intelligence Network (NCIN)

This data flow illustrates how the PHE National Cancer Intelligence Network and PHE Knowledge & Intelligence Teams transform cancer data into intelligence. Our analyses help to drive improvements in prevention, standards of cancer care and clinical outcomes for cancer patients.

The cancer landscape in England has changed considerably in recent times, to reflect a move towards a more integrated public health approach to disease.

Cancer remains a significant public health burden, and is the leading cause of death in all UK nations.

Clinicians
Charities
Commissioners
Policymakers

PHE NCIN Outputs

Tools

- Cancer Commissioning Toolkit, including GP Practice, CCG and Service Profiles
- Cancer e-atlas: incidence, mortality, prevalence, survival and gynaecological hub

Information

- NCIN central analytical projects
- NCIN Site-Specific Clinical Reference Group (SSCRG) projects

Examples of geographies analysed by: NHS ENGLAND

- c. 7,600 GP Practices
- 211 Clinical Commissioning Groups CCG
- 161 Acute Hospital Trusts
- 27 Local Area Teams LAT
- 23 Commissioning Support Units CSU
- 15 Academic Health Science Networks
- 12 Strategic Clinical Networks SCN
- 12 Clinical Senates
- 10 Specialised Commissioning Hubs

PUBLIC HEALTH ENGLAND

- c. 160 Local Authorities
- c. 140 Health & Wellbeing Boards
- 8 Disease Registration Teams
- 8 Knowledge and Intelligence Teams*

UK CONSTITUENT NATIONS

- 5 N. Ireland Health & Social Care Trusts
- 14 Scotland Health Boards
- 7 Wales Health Boards

*PHE Knowledge and Intelligence Teams (KITs)

London	North West
Northern & Yorkshire	South East
South West	West Midlands

Cancer Outcomes and Services Dataset (COSD)

Specification for standardised, mandatory and optional data fields; applicable to some datasets below.

Direct COSD feeds; trust-level

- Patient Administration Systems
- Data from MDT software
- Pathology full-text reports
- Imaging systems

Indirect COSD feeds; national

- Cancer Waiting Times
- Systemic Anti-Cancer Dataset (SACT) Chemotherapy
- Radiotherapy Dataset (RTDS)

Other

- HSCIC Hospital Episode Statistics
- Cancer screening programmes
- ONS – cancer and non-cancer deaths
- National Cancer Audits
- National PET-CT imaging (in testing)

PHE National Cancer Registration Service (NCRS)

8 regional registration teams
Eastern, East Midlands, London,
Northern and Yorkshire, North West,
Oxford, South West and West
Midlands

includes

- Coding and Classification Group
- Data Quality and Registration

Single cancer registration system

English National Cancer Online
Registration Environment
ENCORE

Anonymised patient/tumour level
cancer registrations data from:

- Information and Services Division Scotland
- Welsh Cancer and Intelligence Surveillance Unit
- Northern Ireland Cancer Registry

Cancer Analysis System (CAS) & Cascade

CAS holds a large number of datasets

Cascade holds UK incidence, mortality and survival statistics only

Data linkage in CAS at patient/tumour level

Current data in CAS

Incidence	Mortality
Historical registry data	Geographical lookups
Radiotherapy (RTDS)	PROMs
Populations	Audit

Hospital Episode Statistics (HES):

Admitted Patient Care (Inpatients and Day Case),

Outpatients and Accident & Emergency

Cancer Waiting Times (treatment dataset)

Derived fields eg

Ethnicity, Routes to Diagnosis, Deprivation

Routes to Diagnosis

Routes to Diagnosis, a novel English methodology

LE Ellis-Brookes¹, S McPhail¹, A Ives², M Greenslade², J Shelton¹, S Hion³, M Richards³

¹ National Cancer Intelligence Network, ² Public Health England Knowledge and Intelligence Team (South West), Bristol, ³ Cancer Research UK, London ⁴ NfE England, London

Nationally, what didn't we know?

How people come to get diagnosed with cancer
Whether late diagnosis arises where patients have not gone through the screening or suspected cancer route

Nationally, what did we want to know?

Can we use routinely available datasets to define the route to diagnosis for patients diagnosed with cancer?
If so, how do routes differ by cancer site, age, sex, ethnicity, deprivation or geography?
Are there differences in survival for different routes?

Method: Routes to Diagnosis uses routinely collected data sources to work backwards through patient pathways to examine the sequence of events that led to a cancer diagnosis. The methodology identifies over 70 individual pathways and then categorises patients into one of eight broad Routes (see table to the right).

1. Registration records for cancers newly diagnosed in 2006 to 2008 (ICD-10 C00-C97 excluding C44) for England residents were extracted from the National Cancer Data Repository.

2. Records were linked at patient level to national datasets for inpatient and outpatient activity, Cancer Waiting Times (CWT) monitoring and breast, cervical and bowel cancer screening.

3. Hospital Episode Statistics (HES) data were used to categorise the Route for each cancer individually, the algorithm is described in the three flow diagrams below.

4. Screening and CWT data were then examined with the Route potentially changing to either a Screening or Two Week Wait (urgent referral for suspected cancer) Route.

Figure A

Figures A, B and C show the categorisation of each case into a Route using routine inpatient and outpatient activity data.

Figure B

Figure C

Results: The percentage of patients diagnosed through each Route was broken down by cancer type, age, sex, deprivation, ethnicity and year for 38 specific cancer types.

Relative survival estimates were calculated for 1, 3, 6, 9 and 12 month periods. Across all cancer types, one-year relative survival was significantly lower for Emergency Presentations.

Conclusions: The small selection of results presented show that linked cancer registration and administrative data can be used robustly to categorise the route to a cancer diagnosis for all patients.

The methodology outlined allows for automation of analysis and is robust, with results allowing to several other studies. It is also broadly transferable to other countries, giving international comparisons.

However it is not without its limitations. A small level of impact from background admissions will be present as the algorithm assumes patient activity prior to diagnosis is associated with the diagnosis itself. The method cannot be used to identify presenting symptoms (of cancer or any other illness).

The full methodology published in the British Journal of Cancer*, an information supplement and an Excel workbook containing all available results are available from the NCIN website: www.ncin.org.uk
